Emerson to Build Tech Center in Dayton

[Emerson Climate Technologies](#) will build a 40,000-sq.-ft. research and development center at the corner of South Main and Stewart Streets on the University of Dayton campus.

The Sidney-based company (a division of Fortune 500 Emerson Electric) will invest \$35 million in the new global innovation center, with a groundbreaking planned for October. Up to 50 jobs, mainly engineering and technical positions, will be added.

Emerson will conduct research and education for heating, ventilation, air conditioning and refrigeration technologies at the Dayton facility in cooperation with the University of Dayton.

Research will address industry matters and innovations related to energy efficiency, sustainability, improving system connectivity and more.

Mayor Nan Whaley and City Manager Tim Riordan joined leaders from Emerson and the University of Dayton in announcing the development on July 30.
